

C# Programming

CIS-131 30 O

Spring Term 2024-2025 School Year Section 30 O 3.00 Credits 01/13/2025 to 05/09/2025

Modified 01/13/2025

Course Description

Students will build on their knowledge of fundamental programming concepts in this course by developing a variety of business applications using the C# programming language. A higher-level of understanding of methods and event-handlers, arrays and collections, object-oriented programming concepts, and database programming is the desired outcome. Prerequisite: CIS 130

Outcomes

Technical Skills

Students will demonstrate knowledge with C# to build dynamic/responsive applications.

Critical Thinking

Students will apply their knowledge in new and unique ways to build personalized applications.

Communication/Professionalism

Students will conduct themselves in a professional manner, and effectively communicate with their instructor and peers within course projects.
